BASIC ALGEBRA

for future teachers

Contents

Notation	vii
Preface	ix
Introduction	xi
I Algebraic structures	1
1 Residue classes of integers	1
2 Groupoids	7
3 Isomorphisms of groupoids	19
4 Groups. Examples of groups	28
5 Cyclic groups. Order of elements in groups	36
6 Groups of permutations	43
7 Partitions via subgroups. Lagrange's Theorem	52
8 Normal subgroups, congruences on groups and factor groups	60
9 Classification of finite groups up to order 15	69
10 Rings and subrings. Isomorphisms of rings	76
11 Integral domains, division rings and fields	87
12 Ideals, congruences on rings and factor rings	97
13 Algebraic equations over integral domains	107
II Polynomial algebra	117
14 Polynomials in one uncertain	117
15 Polynomial functions of one variable	124
16 Divisibility of polynomials	129
17 Decompositions of polynomials	139
18 Roots of polynomial functions	144

19	Polynomials with complex, real and integer coefficients	149
20	Derivatives of polynomials	155
21	Polynomials in several variables	164
22	Solving binomial equations	172
23	Quadratic and cubic equations over \mathbb{C}	176
24	Reciprocal equations	182
25	Numerical methods for solving algebraic equations	188
III	Linear algebra	199
26	Matrices	199
27	Systems of linear equations	211
28	Systems of linear equations with a unique solution and invertible matrices	227
29	Determinants	234
30	Vector spaces and subspaces	249
31	Finitely-generated vector spaces. Linear independence, base, dimension	263
32	The subspaces associated to matrices and the spaces of all solutions of homogeneous systems of linear equations	276
33	Linear and direct sums of subspaces	289
34	Linear maps	295
35	Euclidean vector spaces	307
	Bibliography	323
	Index	324
